Task-Based Enterprise Job Simulations & AI Curricula

Comprehensive Course Catalog & Deliverables Guide

Featuring curated simulations with industry partners including **NeuralFrontier**, **Stratagem Consultants**, **SynthAI Labs**, and **NovaCare Health Systems**.

Contents

1	Backend Developer - Build an AI API Service - Agent Designer	2
2	Generative AI Data Analyst - Ask Data Questions with GenAI - Agent Designer	5
3	Full Stack Developer - Build an AI Web Application - Agent Designer	8
4	Multi-Agent AI - Design an AI Workforce - Agent Designer	11
5	AI Agent Developer - HR Recruitment Agent - Agent Designer	14
6	Microfinance Analyst - AI Loan Eligibility Engine - Agent Designer	17
7	LangChain Developer - Build an Enterprise AI Workflow - Agent Designer	20
8	AI Customer Service Manager - Design a GenAI Contact Centre - Agent Designer	23
9	AI Developer - Build a RAG Application - Agent Designer	26
10	Citizen Services AI Agent Resolve a Government Complaint - Agent Designer	29
11	AI Agent Developer - Sales Qualification Agent - Agent Designer	32
12	Healthcare GenAI - Clinical Knowledge Assistant - Agent Designer	35
13	GenAI Prompt Engineer - Enterprise Prompt Lab - Agent Designer	38
14	LangGraph Developer - Build an Agentic Workflow - Agent Designer	41
15	AI Agent Designer - Build Your First Agent - Agent Designer	44
16	AI Agent Developer - Customer Support Agent - Agent Designer	47
17	Agentic AI Consultant - Automate a Business Process - Agent Designer	50
18	GenAI Cybersecurity Analyst - AI SOC Investigation - Agent Designer	53
19	Social Media Intelligence Analyst Decode a Brand Conversation - Agent Designer	56
20	UI/UX Designer Design an AI Product Experience - Agent Designer	59

1 Backend Developer - Build an AI API Service - Agent Designer

Industry: Software **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: FastAPI / Flask, PostgreSQL, Docker / Deployment, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Software sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Backend Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Task 1

2–3 hrs · Intermediate

You will begin by understanding the foundational requirements for the Backend Developer - Build an AI API Service project. Analyze the technical specifications provided by the stakeholders to ensure a successful outcome.

What you'll learn

Identify the core objectives and expected deliverables for the Backend Developer Build an AI API Service workflow. Map out the necessary architecture and dependencies.

What you'll do

Submit a 1-page design document outlining the architecture and required tools.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Task 2

2–3 hrs · Intermediate

Set up your local development environment and gather the necessary data or API keys for Backend Developer - Build an AI API Service. Ensure all SDKs and libraries are correctly configured.

What you'll learn

Configure a robust environment using virtual environments, API access, and required datasets.

What you'll do

Provide a screenshot of your terminal showing successful environment initialization and API connection.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Task 3

2–3 hrs · Intermediate

Begin the core implementation phase for Backend Developer - Build an AI API Service. You will write the primary code logic to achieve the minimum viable product (MVP).

What you'll learn

Translate the design document into executable code. Handle basic error cases and edge conditions.

What you'll do

Submit your main implementation script (.py or .js) demonstrating the core functionality.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Task 4

2–3 hrs · Intermediate

Enhance your implementation by integrating advanced Generative AI capabilities for Backend Developer - Build an AI API Service. Fine-tune the prompts or logic to improve performance.

What you'll learn

Apply advanced AI techniques such as context window optimization or prompt chaining.

What you'll do

Submit a comparison report showing the before and after performance of your AI integration.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Task 5

2–3 hrs · Intermediate

Perform a comprehensive Responsible AI audit on your Backend Developer - Build an AI API Service solution. Check for biases, safety guardrails, and data privacy compliance.

What you'll learn

Identify potential ethical concerns and implement safety filters in your application.

What you'll do

Submit an audit checklist and a short paragraph explaining the safety measures added.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Task 6

2–3 hrs · Intermediate

Prepare a final presentation for the Backend Developer - Build an AI API Service project to showcase your work to the engineering team and product managers.

What you'll learn

Communicate complex technical implementations to both technical and non-technical stakeholders effectively.

What you'll do

Submit a 5-slide presentation summarizing your architecture, challenges, and final solution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

2 Generative AI Data Analyst - Ask Data Questions with GenAI - Agent Designer

Industry: GenAI + Analytics **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python / Pandas, Data Visualization, SQL, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the GenAI + Analytics sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Generative AI Data Analyst, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Task 1

2-3 hrs · Intermediate

You will begin by understanding the foundational requirements for the Generative AI Data Analyst - Ask Data Questions with GenAI project. Analyze the technical specifications provided by the stakeholders to ensure a successful outcome.

What you'll learn

Identify the core objectives and expected deliverables for the Generative AI Data Analyst Ask Data Questions with GenAI workflow. Map out the necessary architecture and dependencies.

What you'll do

Submit a 1-page design document outlining the architecture and required tools.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Task 2

2–3 hrs · Intermediate

Set up your local development environment and gather the necessary data or API keys for Generative AI Data Analyst - Ask Data Questions with GenAI. Ensure all SDKs and libraries are correctly configured.

What you'll learn

Configure a robust environment using virtual environments, API access, and required datasets.

What you'll do

Provide a screenshot of your terminal showing successful environment initialization and API connection.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Task 3

2–3 hrs · Intermediate

Begin the core implementation phase for Generative AI Data Analyst - Ask Data Questions with GenAI. You will write the primary code logic to achieve the minimum viable product (MVP).

What you'll learn

Translate the design document into executable code. Handle basic error cases and edge conditions.

What you'll do

Submit your main implementation script (.py or .js) demonstrating the core functionality.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Task 4

2–3 hrs · Intermediate

Enhance your implementation by integrating advanced Generative AI capabilities for Generative AI Data Analyst - Ask Data Questions with GenAI. Fine-tune the prompts or logic to improve performance.

What you'll learn

Apply advanced AI techniques such as context window optimization or prompt chaining.

What you'll do

Submit a comparison report showing the before and after performance of your AI integration.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Task 5

2–3 hrs · Intermediate

Perform a comprehensive Responsible AI audit on your Generative AI Data Analyst - Ask Data Questions with GenAI solution. Check for biases, safety guardrails, and data privacy compliance.

What you'll learn

Identify potential ethical concerns and implement safety filters in your application.

What you'll do

Submit an audit checklist and a short paragraph explaining the safety measures added.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Task 6

2–3 hrs · Intermediate

Prepare a final presentation for the Generative AI Data Analyst - Ask Data Questions with GenAI project to showcase your work to the engineering team and product managers.

What you'll learn

Communicate complex technical implementations to both technical and non-technical stakeholders effectively.

What you'll do

Submit a 5-slide presentation summarizing your architecture, challenges, and final solution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

3 Full Stack Developer - Build an AI Web Application - Agent Designer

Industry: Full Stack
Duration: 12-18 hrs (Self-paced)
Primary Skills: Next.js / React, Node.js, OpenAI APIs, Skillzza AI Mentor

Partner Enterprise: Tech Innovations Ltd
Mode: Individual, task-based simulation

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Full Stack sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Full Stack Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. ✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

4 Multi-Agent AI - Design an AI Workforce - Agent Designer

Industry: IT **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, CrewAI / AutoGen, Prompt Engineering, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the IT sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Multi-Agent AI, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand - Analyze the Problem and Dataset

2-3 hrs · Intermediate

You've just joined a healthcare analytics team tasked with reducing no-shows for medical appointments. Your first step is to understand the scope of the problem and analyze the provided dataset.

What you'll learn

Analyze the impact of no-shows on healthcare efficiency (research online). Load the provided appointment dataset and perform an initial review of its fields, data types, 11 and missing values. Summarize the key trends in no-show rates (e.g., by gender, age, and health condition).

What you'll do

Submit a report containing: Key insights about no-show trends (graphs and tables). Summary of missing values and potential data quality issue.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data/Setup - Preprocess and Prepare the Dataset

2–3 hrs · Intermediate

The dataset needs to be cleaned and prepared for predictive modeling. You'll handle missing values, encode categorical variables, and address class imbalance.

What you'll learn

Handle missing values using appropriate imputation techniques. Encode categorical variables like 'Gender' and 'HealthCondition'. Address class imbalance in the 'NoShow' field using techniques such as oversampling or undersampling.

What you'll do

Submit a clean and preprocessed dataset ready for modeling. Include a summary of preprocessing steps taken.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build/Execute - Train and Evaluate the No-Show Predictor

2–3 hrs · Intermediate

Using the preprocessed dataset, you'll train a classification model to predict whether a patient is likely to no-show an appointment.

What you'll learn

Split the dataset into training and testing sets (e.g., 80/20 split). Train at least two models (e.g., Logistic Regression, Random Forest). Evaluate model performance using metrics such as accuracy, precision, recall, and F1-score.

What you'll do

Submit a summary comparing the performance of different models. Include code snippets and visualizations of key metrics (e.g., confusion matrix).

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: GenAI/Explanation - Interpret Predictions

2–3 hrs · Intermediate

Stakeholders need to understand the factors influencing no-show predictions to trust the model's recommendations. You'll use explainable AI techniques to interpret predictions.

What you'll learn

Choose one model and explain its predictions using SHAP or LIME. Identify which features contribute most to the likelihood of a no-show (e.g., age, SMS reminder).

What you'll do

Submit a document with feature importance graphs and written explanations of model predictions.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit/Responsible AI - Ensure Ethical Deployment

2–3 hrs · Intermediate

AI models in healthcare must adhere to ethical principles. You are tasked with auditing the no-show predictor for biases.

What you'll learn

Analyze model predictions for potential biases (e.g., gender or age bias). Propose strategies to mitigate any identified biases (e.g., reweighting samples or adding fairness constraints).

What you'll do

Submit an audit report on model fairness and proposed mitigation strategie.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Recommendation - Segment Patients and Propose Interventions

2–3 hrs · Intermediate

Based on your predictions, segment patients by no-show risk levels (e.g., high, medium, low). Develop actionable strategies to reduce no-shows for each segment.

What you'll learn

Use segmentation techniques to group patients by risk levels. Propose intervention strategies for each segment (e.g., SMS reminders, telehealth options for high-risk patients).

What you'll do

Submit a stakeholder presentation with: Patient segmentation visualiza tions. Intervention strategies tailored to each risk group.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

5 AI Agent Developer - HR Recruitment Agent - Agent Designer

Industry: IT **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, LangChain, ATS Integration, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the IT sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a AI Agent Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand - Explore Customer Churn Dynamics

2-3 hrs · Intermediate

Your company has collected customer health data, including engagement metrics, support tickets, product usage, and customer tenure. The leadership team has tasked you with understanding the key factors contributing to customer churn. 40

What you'll learn

Study the dataset provided ('customer health data.csv'). Identify and define key features (e.g., usage frequency, number of support tickets, NPS scores). Research and summarize the common drivers of churn in SaaS businesses.

What you'll do

Submit a one-page summary of churn drivers with a brief description of the dataset features.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data/Setup - Clean and Prepare the Data

2–3 hrs · Intermediate

The raw dataset has missing values and inconsistent entries. To ensure the accuracy of your analysis, you need to clean and preprocess the data.

What you'll learn

Handle missing or null values appropriately. Encode categorical variables (e.g., customer segment, industry). Scale numeric features for consistent input to machine learning models. Split the data into training and testing sets (80/20 split).

What you'll do

Submit a clean dataset and a description of the preprocessing steps you performed.

When you are done with this task, mark it as complete to proceed to the next one.

✓ Completed

Task 3: Build/Execute - Predict Churn Using Machine Learning

2–3 hrs · Intermediate

You are now ready to build a predictive model to classify customers as either "churn" or "not churn."

What you'll learn

Train a Logistic Regression model to predict churn. Evaluate the model's performance using metrics like accuracy, precision, recall, and F1-score. Perform hyperparameter tuning to improve model performance.

What you'll do

Submit the trained model, evaluation metrics, and a short explanation of how you improved model performance.

When you are done with this task, mark it as complete to proceed to the next one.

✓ Completed

Task 4: GenAI/Explanation - Identify Key Drivers of Churn

2–3 hrs · Intermediate

Leadership wants to know **why** your model predicts certain customers are at risk of churning. Use interpretability techniques to explain the predictions.

What you'll learn

Use SHAP (SHapley Additive exPlanations) to identify the top features influencing churn predictions. Visualize and summarize the contribution of each feature to the model's decisions. Highlight one example of a high-risk customer and explain why the model flagged them.

What you'll do

Submit a report with SHAP visualizations and an explanation of key churn drivers.

When you are done with this task, mark it as complete to proceed to the next one.

✓ Completed

Task 5: Audit/Responsible AI - Ensure Model Fairness

2–3 hrs · Intermediate

The leadership team is concerned about potential bias in the model. For instance, are certain customer segments unfairly flagged as high risk?

What you'll learn

Analyze the fairness of your model across different customer demographics (e.g., industry, region). Identify any biases and adjust the model or preprocessing steps if necessary. Document your Responsible AI process and findings.

What you'll do

Submit a fairness analysis report with any corrective actions taken.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Recommendation - Propose a Retention Strategy

2–3 hrs · Intermediate

You've identified high-risk customers and the key drivers of churn. It's now time to present a retention strategy to the leadership team.

What you'll learn

Create a customer success plan for one high-risk customer, including engagement strategies, personalized recommendations, and a measurable action plan. Summarize overall recommendations for reducing churn. 41

What you'll do

Submit a 3-slide presentation or report summarizing: 1. High-risk customer profile and proposed success plan. 2. Insights from churn analysis. 3. Retention strategy recommendations.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

6 Microfinance Analyst - AI Loan Eligibility Engine - Agent Designer

Industry: Banking, Microfinance & FinTech **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python / Pandas, Scikit-Learn, Data Analytics, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Banking, Microfinance & FinTech sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Microfinance Analyst, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand the Scope of Research

2–3 hrs · Intermediate

Your manager has provided a vague request: "Find out how AI can transform the logistics industry." You need to refine the research scope to make it actionable.

What you'll learn

Break down the research question into sub-questions (e.g., "What are current pain points in logistics that AI can address?"). Research current AI applications in logistics using Google Scholar and ChatGPT. Identify specific areas (e.g., route optimization, inventory management) for deeper research.

What you'll do

Submit a refined research scope document (1 page) outlining sub-questions, focus areas, and the rationale for choosing logistics as the target industry.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data Collection and Setup

2–3 hrs · Intermediate

You need reliable data to perform your analysis. Collect information from primary (official reports, industry statistics) and secondary (blogs, AI forums) sources.

What you'll learn

Use AI-powered web scraping tools (or manually search) to collect recent data on logistics trends and challenges. Organize the data into categories (e.g., pain points, solutions, emerging technologies). Ensure sources are credible by cross-checking for bias and accuracy.

What you'll do

Submit a structured dataset (Google Sheets or Excel) with at least 20 data points categorized and validated for your analysis.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build Insights Using AI Tools

2–3 hrs · Intermediate

You now have raw data and need to uncover trends and actionable insights. Leverage AI tools to synthesize information.

What you'll learn

Use ChatGPT to summarize industry trends and challenges based on your data. Apply NLP techniques to identify recurring terms and themes in textual data. Highlight correlations between AI adoption and efficiency gains in logistics.

What you'll do

Submit a concise insights report (2 pages) summarizing trends, challenges, and opportunities derived from the analysis.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: GenAI-Powered Explanation

2–3 hrs · Intermediate

You need to explain complex findings to non-experts. Use generative AI tools to craft an engaging summary.

What you'll learn

In ChatGPT, generate a simplified explanation of your insights for stakeholders unfamiliar with AI. Create a visual representation (infographic) that showcases key points using tools like Canva or Google Slides.

What you'll do

Submit a one-page stakeholder-friendly summary and a visual infographic explaining your research findings.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit and Responsible AI Practices

2–3 hrs · Intermediate

Your firm emphasizes responsible AI use. Ensure your research adheres to ethical standards and avoids biased data.

What you'll learn

Review your data sources for potential bias or misinformation. Write a short audit report detailing how you ensured ethical AI practices throughout your research. Identify any gaps or risks in your findings.

What you'll do

Submit a one-page Responsible AI Audit Report summarizing your validation process and ethical consideration.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Your Recommendation

2–3 hrs · Intermediate

The firm's leadership team needs your recommendation on whether logistics is a viable market for AI expansion. Prepare and pitch your proposal.

What you'll learn

Combine all your findings into a professional presentation. Include key insights, visualizations, risks, and actionable recommendations. Record a 5-minute video pitch summarizing your proposal.

What you'll do

Submit a presentation deck (PDF or PPT) and a video recording of your pitch.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

7 LangChain Developer - Build an Enterprise AI Workflow - Agent Designer

Industry: GenAI **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, LangChain, Enterprise Data Integration, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the GenAI sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a LangChain Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand the Company and Industry

2-3 hrs · Intermediate

Your firm has been approached to evaluate TechNova Inc., a mid-sized technology company specializing in AI software solutions. You must first understand the company's business model and the competitive landscape.

What you'll learn

Research TechNova's business model, revenue streams, and growth trajectory. Identify key industry trends affecting the AI software sector. Review TechNova's financial statements and summarize the company's current standing. 29

What you'll do

A one-page summary of TechNova's business model, industry trends, and key financial metrics (e.g., revenue, EBITDA).

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data Gathering and Setup

2–3 hrs · Intermediate

To perform a valuation analysis, you need to gather data for comparable companies in TechNova's sector. This includes identifying peers based on size, geography, and industry focus.

What you'll learn

Identify 5-7 comparable companies in the AI software sector using publicly available financial data. Collect key financial metrics for these companies: revenue, EBITDA, net income, market capitalization, P/E ratio, and EV/EBITDA.

What you'll do

Create an Excel spreadsheet listing the comparable companies with their financial metrics and valuation multiples.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build Valuation Models

2–3 hrs · Intermediate

With the data prepared, you will perform Comparable Company Analysis (CCA) and Precedent Transaction Analysis (PTA) to determine TechNova's valuation range.

What you'll learn

Calculate TechNova's implied valuation based on the median and mean EV/EBITDA and P/E ratios of the comparable companies. Perform Precedent Transaction Analysis by identifying recent M&A transactions in the AI sector and calculating valuation multiples.

What you'll do

An Excel model showcasing valuation calculations for TechNova using both CCA and PTA methods.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Explain Valuation Insights Using GenAI

2–3 hrs · Intermediate

Clients often request simplified explanations of complex models. You are tasked with interpreting your valuation results using Generative AI tools to craft a clear narrative.

What you'll learn

Use ChatGPT or similar GenAI tools to generate a client-facing explanation of TechNova's valuation. Highlight key insights from the comparable company analysis and precedent transaction analysis.

What you'll do

A 250-word client-friendly summary explaining TechNova's valuation and the rationale behind it.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit and Responsible Valuation

2–3 hrs · Intermediate

Accuracy and integrity are critical in investment banking. You must audit your valuation for errors and ensure your recommendations align with ethical standards.

What you'll learn

Cross-check all calculations, ensuring no formula errors or data discrepancies. Identify any assumptions made in your analysis and validate their reasonability. Discuss potential risks in using comparable company analysis and precedent transaction methods.

What you'll do

An audit report highlighting the checks performed, assumptions validated, and risk considerations.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Your Recommendations

2–3 hrs · Intermediate

You are presenting your findings to the firm's senior leadership team. Your Investment Memo must clearly articulate your valuation analysis and provide actionable recommendations.

What you'll learn

Compile your analysis into a professional-grade Investment Memo. Include an executive summary, valuation details, comparison charts, and a clear recommendation for TechNova. Create a visually engaging presentation summarizing your findings.

What you'll do

A 3-5 page Investment Memo in PDF format. A PowerPoint/Google Slides deck with 5-7 slides summarizing your valuation analysis and recommendations.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

8 AI Customer Service Manager - Design a GenAI Contact Centre - Agent Designer

Industry: CX / AI **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Conversational AI Design, CX Strategy, Analytics, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the CX / AI sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a AI Customer Service Manager, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand Campaign Metrics

2-3 hrs · Intermediate

You are handed the campaign performance report for a recent marketing initiative. The report includes metrics like impressions, clicks, CTR, CPC, conversions, and ROAS. Your first task is to understand the KPIs and identify which campaigns are underperforming. 43

What you'll learn

Review the dataset provided, which includes metrics for three campaigns: *Google Ads*, *Facebook Ads*, and *Email Marketing*. Calculate key performance metrics and identify trends.

What you'll do

Submit a summary report highlighting: 1. Campaigns ranked by performance (e.g., highest ROI). 2. Any anomalies or trends observe.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data Segmentation and Audience Analysis

2–3 hrs · Intermediate

The marketing team suspects that poor audience targeting is contributing to underwhelming campaign performance. You are tasked with segmenting the audience based on demographics, interests, and past purchasing behavior.

What you'll learn

Use the audience data provided (age, gender, location, purchase history). Create at least three audience segments (e.g., "Eco-conscious millennials," "Budget-friendly families").

What you'll do

Submit a document with: 1. Defined audience segments and their characteristics. 2. The rationale for selecting these segments.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Generate AI-Powered Campaign Content

2–3 hrs · Intermediate

Once the audience segments are defined, the marketing team needs fresh content tailored to each segment. You've been asked to use Generative AI to create ad copy for *Google Ads* and *Facebook Ads*.

What you'll learn

Use a Generative AI tool (e.g., ChatGPT) to create ad copy based on the audience segments defined in Task 2. Ensure the content aligns with the company's eco-friendly brand voice.

What you'll do

Submit: 1. Three sets of ad copy tailored to each audience segment. 2. Justification for how the content aligns with the audience's needs and the brand's identity.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Optimise Campaigns Using AI

2–3 hrs · Intermediate

The marketing team has requested you to use an AI-powered optimisation tool to simulate changes to the campaign. Your goal is to increase ROI while staying within the budget.

What you'll learn

Use the provided campaign data and feed it into the AI optimisation tool (e.g., Google Ads Performance Planner). Adjust variables like budget allocation, bid strategy, and targeting.

What you'll do

Submit: 1. A before-and-after comparison of the campaign metrics (e.g., CTR, ROAS). 2. A short explanation of what changes were made and why.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit for Responsible AI

2–3 hrs · Intermediate

Your manager is concerned about ethical considerations in using Generative AI for marketing. She asks you to assess the AI-generated content for biases and ensure it is inclusive.

What you'll learn

Review the ad copy generated in Task 3 for potential biases (e.g., stereotypes, exclusionary language). Revise the content to ensure it aligns with ethical marketing practices.

What you'll do

Submit a revised ad copy along with a brief explanation of the changes made and why they were necessary.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Recommendations

2–3 hrs · Intermediate

You are required to present your findings and recommendations to the Marketing Director and Growth Team. This presentation is critical to securing approval for implementing your optimisation strategy.

What you'll learn

Prepare a 5-slide presentation covering: 1. Campaign performance analysis (Task 1). 2. Audience segmentation (Task 2). 3. AI-generated content (Task 3). 4. Optimisation strategy (Task 4). 5. Responsible AI audit (Task 5).

What you'll do

Submit your presentation in PDF format.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

9 AI Developer - Build a RAG Application - Agent Designer

Industry: GenAI **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, LangChain / LlamaIndex, Vector Databases (Pinecone), Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the GenAI sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a AI Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Task 1

2–3 hrs · Intermediate

You will begin by understanding the foundational requirements for the AI Developer - Build a RAG Application project. Analyze the technical specifications provided by the stakeholders to ensure a successful outcome.

What you'll learn

Identify the core objectives and expected deliverables for the AI Developer Build a RAG Application workflow. Map out the necessary architecture and dependencies.

What you'll do

Submit a 1-page design document outlining the architecture and required tools.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Task 2

2–3 hrs · Intermediate

Set up your local development environment and gather the necessary data or API keys for AI Developer - Build a RAG Application. Ensure all SDKs and libraries are correctly configured.

What you'll learn

Configure a robust environment using virtual environments, API access, and required datasets.

What you'll do

Provide a screenshot of your terminal showing successful environment initialization and API connection.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Task 3

2–3 hrs · Intermediate

Begin the core implementation phase for AI Developer - Build a RAG Application. You will write the primary code logic to achieve the minimum viable product (MVP).

What you'll learn

Translate the design document into executable code. Handle basic error cases and edge conditions.

What you'll do

Submit your main implementation script (.py or .js) demonstrating the core functionality.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Task 4

2–3 hrs · Intermediate

Enhance your implementation by integrating advanced Generative AI capabilities for AI Developer - Build a RAG Application. Fine-tune the prompts or logic to improve performance.

What you'll learn

Apply advanced AI techniques such as context window optimization or prompt chaining.

What you'll do

Submit a comparison report showing the before and after performance of your AI integration.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Task 5

2–3 hrs · Intermediate

Perform a comprehensive Responsible AI audit on your AI Developer - Build a RAG Application solution. Check for biases, safety guardrails, and data privacy compliance.

What you'll learn

Identify potential ethical concerns and implement safety filters in your application.

What you'll do

Submit an audit checklist and a short paragraph explaining the safety measures added.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Task 6

2–3 hrs · Intermediate

Prepare a final presentation for the AI Developer - Build a RAG Application project to showcase your work to the engineering team and product managers.

What you'll learn

Communicate complex technical implementations to both technical and non-technical stakeholders effectively.

What you'll do

Submit a 5-slide presentation summarizing your architecture, challenges, and final solution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

10 Citizen Services AI Agent Resolve a Government Complaint - Agent Designer

Industry: Government & Public Services **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, Data Privacy Frameworks, NLP, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Government & Public Services sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Specialist, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand the Problem

2–3 hrs · Intermediate

A government services portal receives 10,000+ citizen complaints every month. These complaints vary from potholes and waste management to utility bill disputes. Your first step is to understand the dataset and problem statement. 52

What you'll learn

1. Explore a provided dataset containing complaints with fields: 'Complaint ID': Unique identifier. 'Citizen Name': Name of complainant. 'Complaint Text': The full description of the complaint. 'Department': Department responsible for resolution (e.g., Waste Management, Public Works). 'Urgency': Low, Medium, High. 'Status': Resolved, Pending, Escalated. 2. Analyze the dataset for patterns, such as the most common complaint types and departments with the highest complaint volumes.

What you'll do

Submit a short report (300 words) with: Key patterns in the dataset. Suggestions for how AI can reduce backlog and improve response time.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Prepare the Data

2–3 hrs · Intermediate

You must clean and preprocess the complaint data to prepare it for text classification.

What you'll learn

1. Perform text preprocessing on the 'Complaint Text' field, including: Tokenization. Stopword removal. Lemmatization. 2. Split the dataset into training, validation, and test sets. 3. Encode the labels ('Department') for classification using one-hot encoding or label encoding.

What you'll do

Submit the cleaned dataset and a summary of your preprocessing step.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build the Classification Model

2–3 hrs · Intermediate

Now, you will build a machine learning model to classify complaints into the correct department.

What you'll learn

1. Train a text classification model using Hugging Face Transformers (e.g., DistilBERT). 2. Evaluate the model using metrics like accuracy, precision, recall, and F1-score. Aim for an F1-score ≥ 0.8 . 3. Save the trained model for later use in the pipeline.

What you'll do

Submit the trained model file and a report on model performance (include a confusion matrix).

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Integrate Knowledge Retrieval

2–3 hrs · Intermediate

Once a complaint is classified, the AI Agent should retrieve relevant knowledge articles to suggest resolutions.

What you'll learn

1. Load a provided knowledge base with fields: 'Article ID': Unique identifier. 'Department': Associated department. 'Keywords': Tags for retrieval. 'Article Text': Full text of the article. 2. Use embeddings (e.g., SentenceTransformers) to generate vector representations for the articles and complaints. 3. Implement a similarity search algorithm (e.g., cosine similarity) to retrieve the top 3 articles for each complaint.

What you'll do

Submit your knowledge retrieval script and an output file showing the top 3 articles for 10 test complaint.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Test Responsible AI Practices

2–3 hrs · Intermediate

AI systems for citizen services must be fair and unbiased. You need to audit your classification model for potential biases.

What you'll learn

1. Analyze model performance across different demographics (e.g., names indicating gender or region).
2. Check for overrepresentation or neglect of certain complaint categories.
3. Propose methods to address any bias found (e.g., rebalancing training data).

What you'll do

Submit an audit report (300 words) outlining your findings and proposed solution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Final Recommendation

2–3 hrs · Intermediate

You are pitching your solution to government stakeholders. Summarize your AI pipeline and demonstrate its impact on complaint resolution efficiency.

What you'll learn

1. Create a presentation (5 slides) covering: Problem statement and dataset analysis. Classification model results. Knowledge retrieval accuracy. Responsible AI findings. Overall impact and next steps.
2. Record a 3-minute video walkthrough of your presentation.

What you'll do

Submit your slides and video walkthrough.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

11 AI Agent Developer - Sales Qualification Agent - Agent Designer

Industry: IT **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, LangChain, CRM Integration (Salesforce), Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the IT sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a AI Agent Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand the Problem and Define the Avatar Persona

2–3 hrs · Intermediate

The coworking space brand has asked for a friendly and professional virtual receptionist that can handle interactions with users in English. The receptionist must reflect the brand's values: professionalism, inclusivity, and innovation.

What you'll learn

Study the company background and target audience. Define a detailed persona for the virtual receptionist, including its appearance, tone, and key personality traits. Draft a document that outlines the avatar's objective and scope of interactions (e.g., greeting visitors, answering FAQs, scheduling appointments).

What you'll do

A detailed persona document with at least the following fields: Name, Appearance, Personality Traits, Tone of Voice, and Key Responsibility.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Build the Knowledge Base for the Avatar

2–3 hrs · Intermediate

The virtual receptionist will need to answer FAQs and provide assistance to users. You are tasked with building an initial knowledge base that will serve as the foundation for the avatar's conversational abilities.

What you'll learn

Research common FAQs for coworking spaces (e.g., pricing, amenities, booking rules). Organize the questions and answers into a structured format using Google Sheets or Airtable. Include at least 20 questions and answers in the knowledge base.

What you'll do

A knowledge base in Google Sheets or Airtable with fields: Question, Answer, and Tags (e.g., pricing, scheduling).

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Configure the Avatar's Chatbot and Train the AI

2–3 hrs · Intermediate

It's time to bring the virtual receptionist to life! You will set up a chatbot platform, import the knowledge base, and train the AI to handle user queries.

What you'll learn

Choose a conversational AI platform (e.g., Dialogflow, Rasa). Create intents and entities based on the knowledge base. Train the AI using the imported data and refine its ability to understand user queries.

What you'll do

A working chatbot model that can handle the 20 FAQs with appropriate responses. Screenshots or a short video demonstrating the chatbot's functionality.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Generate AI Avatar Scripts for Conversations

2–3 hrs · Intermediate

The virtual receptionist's conversations must feel natural and engaging. You will design scripted responses and use a generative AI tool to generate variations of these scripts.

What you'll learn

Write a list of 10 scripted dialogues for common scenarios (e.g., greeting visitors, answering FAQs, handling complaints). Use a generative AI tool like OpenAI's GPT to create variations of these scripts. Ensure the scripts align with the persona's tone and personality.

What you'll do

A document with the original scripts and AI-generated variations for the 10 scenarios.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Test and Audit the Avatar for Responsible AI Practices

2–3 hrs · Intermediate

Before launching the virtual receptionist, you need to test its performance and ensure it aligns with ethical AI principles, such as avoiding bias and ensuring inclusivity.

What you'll learn

Test the avatar with 10 different user inputs, including edge cases (e.g., ambiguous or offensive queries). Document the avatar's responses and identify areas for improvement. Write a short report on how the avatar adheres to responsible AI principles.

What you'll do

A testing report with user input, avatar output, and identified issues. A brief summary of the ethical considerations addressed in the avatar's design.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Your Final Avatar and Recommendations

2–3 hrs · Intermediate

The client is excited to see the final virtual receptionist in action. You will present your work, explain your design choices, and outline recommendations for future improvements.

What you'll learn

Create a presentation (slides or a video) showcasing the avatar's persona, knowledge base, conversation flow, and testing results. Include a demo of the avatar handling at least 38 5 different scenarios. Suggest improvements or future features for the avatar.

What you'll do

A presentation (PDF or video) with the avatar's demo and recommendations for future iterations.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

12 Healthcare GenAI - Clinical Knowledge Assistant - Agent Designer

Industry: Healthcare AI **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, RAG, Vector Databases, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Healthcare AI sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Healthcare GenAI, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Task 1

2–3 hrs · Intermediate

You will begin by understanding the foundational requirements for the Healthcare GenAI - Clinical Knowledge Assistant project. Analyze the technical specifications provided by the stakeholders to ensure a successful outcome.

What you'll learn

Identify the core objectives and expected deliverables for the Healthcare GenAI Clinical Knowledge Assistant workflow. Map out the necessary architecture and dependencies.

What you'll do

Submit a 1-page design document outlining the architecture and required tools.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Task 2

2–3 hrs · Intermediate

Set up your local development environment and gather the necessary data or API keys for Healthcare GenAI - Clinical Knowledge Assistant. Ensure all SDKs and libraries are correctly configured.

What you'll learn

Configure a robust environment using virtual environments, API access, and required datasets.

What you'll do

Provide a screenshot of your terminal showing successful environment initialization and API connection.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Task 3

2–3 hrs · Intermediate

Begin the core implementation phase for Healthcare GenAI - Clinical Knowledge Assistant. You will write the primary code logic to achieve the minimum viable product (MVP).

What you'll learn

Translate the design document into executable code. Handle basic error cases and edge conditions.

What you'll do

Submit your main implementation script (.py or .js) demonstrating the core functionality.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Task 4

2–3 hrs · Intermediate

Enhance your implementation by integrating advanced Generative AI capabilities for Healthcare GenAI - Clinical Knowledge Assistant. Fine-tune the prompts or logic to improve performance.

What you'll learn

Apply advanced AI techniques such as context window optimization or prompt chaining.

What you'll do

Submit a comparison report showing the before and after performance of your AI integration.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Task 5

2–3 hrs · Intermediate

Perform a comprehensive Responsible AI audit on your Healthcare GenAI - Clinical Knowledge Assistant solution. Check for biases, safety guardrails, and data privacy compliance.

What you'll learn

Identify potential ethical concerns and implement safety filters in your application.

What you'll do

Submit an audit checklist and a short paragraph explaining the safety measures added.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Task 6

2–3 hrs · Intermediate

Prepare a final presentation for the Healthcare GenAI - Clinical Knowledge Assistant project to showcase your work to the engineering team and product managers.

What you'll learn

Communicate complex technical implementations to both technical and non-technical stakeholders effectively.

What you'll do

Submit a 5-slide presentation summarizing your architecture, challenges, and final solution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

13 GenAI Prompt Engineer - Enterprise Prompt Lab - Agent Designer

Industry: GenAI
Duration: 12-18 hrs (Self-paced)
Primary Skills: Python, Prompt Engineering, OpenAI / Claude APIs, Skillzza AI Mentor

Partner Enterprise: Tech Innovations Ltd
Mode: Individual, task-based simulation

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the GenAI sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a GenAI Prompt Engineer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Task 1

2–3 hrs · Intermediate

You will begin by understanding the foundational requirements for the GenAI Prompt Engineer - Enterprise Prompt Lab project. Analyze the technical specifications provided by the stakeholders to ensure a successful outcome.

What you'll learn

Identify the core objectives and expected deliverables for the GenAI Prompt Engineer Enterprise Prompt Lab workflow. Map out the necessary architecture and dependencies.

What you'll do

Submit a 1-page design document outlining the architecture and required tools.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Task 2

2–3 hrs · Intermediate

Set up your local development environment and gather the necessary data or API keys for GenAI Prompt Engineer - Enterprise Prompt Lab. Ensure all SDKs and libraries are correctly configured.

What you'll learn

Configure a robust environment using virtual environments, API access, and required datasets.

What you'll do

Provide a screenshot of your terminal showing successful environment initialization and API connection.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Task 3

2–3 hrs · Intermediate

Begin the core implementation phase for GenAI Prompt Engineer - Enterprise Prompt Lab. You will write the primary code logic to achieve the minimum viable product (MVP).

What you'll learn

Translate the design document into executable code. Handle basic error cases and edge conditions.

What you'll do

Submit your main implementation script (.py or .js) demonstrating the core functionality.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Task 4

2–3 hrs · Intermediate

Enhance your implementation by integrating advanced Generative AI capabilities for GenAI Prompt Engineer - Enterprise Prompt Lab. Fine-tune the prompts or logic to improve performance.

What you'll learn

Apply advanced AI techniques such as context window optimization or prompt chaining.

What you'll do

Submit a comparison report showing the before and after performance of your AI integration.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Task 5

2–3 hrs · Intermediate

Perform a comprehensive Responsible AI audit on your GenAI Prompt Engineer - Enterprise Prompt Lab solution. Check for biases, safety guardrails, and data privacy compliance.

What you'll learn

Identify potential ethical concerns and implement safety filters in your application.

What you'll do

Submit an audit checklist and a short paragraph explaining the safety measures added.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Task 6

2–3 hrs · Intermediate

Prepare a final presentation for the GenAI Prompt Engineer - Enterprise Prompt Lab project to showcase your work to the engineering team and product managers.

What you'll learn

Communicate complex technical implementations to both technical and non-technical stakeholders effectively.

What you'll do

Submit a 5-slide presentation summarizing your architecture, challenges, and final solution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

14 LangGraph Developer - Build an Agentic Workflow - Agent Designer

Industry: IT **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, LangGraph, State Machines, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the IT sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a LangGraph Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Task 1

2–3 hrs · Intermediate

You will begin by understanding the foundational requirements for the LangGraph Developer - Build an Agentic Workflow project. Analyze the technical specifications provided by the stakeholders to ensure a successful outcome.

What you'll learn

Identify the core objectives and expected deliverables for the LangGraph Developer Build an Agentic Workflow workflow. Map out the necessary architecture and dependencies.

What you'll do

Submit a 1-page design document outlining the architecture and required tools.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Task 2

2–3 hrs · Intermediate

Set up your local development environment and gather the necessary data or API keys for LangGraph Developer - Build an Agentic Workflow. Ensure all SDKs and libraries are correctly configured.

What you'll learn

Configure a robust environment using virtual environments, API access, and required datasets.

What you'll do

Provide a screenshot of your terminal showing successful environment initialization and API connection.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Task 3

2–3 hrs · Intermediate

Begin the core implementation phase for LangGraph Developer - Build an Agentic Workflow. You will write the primary code logic to achieve the minimum viable product (MVP).

What you'll learn

Translate the design document into executable code. Handle basic error cases and edge conditions.

What you'll do

Submit your main implementation script (.py or .js) demonstrating the core functionality.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Task 4

2–3 hrs · Intermediate

Enhance your implementation by integrating advanced Generative AI capabilities for LangGraph Developer - Build an Agentic Workflow. Fine-tune the prompts or logic to improve performance.

What you'll learn

Apply advanced AI techniques such as context window optimization or prompt chaining.

What you'll do

Submit a comparison report showing the before and after performance of your AI integration.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Task 5

2–3 hrs · Intermediate

Perform a comprehensive Responsible AI audit on your LangGraph Developer - Build an Agentic Workflow solution. Check for biases, safety guardrails, and data privacy compliance.

What you'll learn

Identify potential ethical concerns and implement safety filters in your application.

What you'll do

Submit an audit checklist and a short paragraph explaining the safety measures added.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Task 6

2–3 hrs · Intermediate

Prepare a final presentation for the LangGraph Developer - Build an Agentic Workflow project to showcase your work to the engineering team and product managers.

What you'll learn

What you'll do

Submit a 5-slide presentation summarizing your architecture, challenges, and final solution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

15 AI Agent Designer - Build Your First Agent - Agent Designer

Industry: IT **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python / Jupyter Notebooks, ChatGPT / Claude (Prompting), LangGraph / LangChain, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the IT sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a AI Agent Designer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand

2-3 hrs · Intermediate

You are tasked with designing an AI agent for a productivity app. The agent will assist users in scheduling meetings, tracking tasks, and answering queries.

What you'll learn

Research and define the core functionalities of the agent. Create a user persona and list potential use cases for the agent.

What you'll do

A document outlining the agent's purpose, target audience, and core functionalities. A list of 5-7 use cases based on the user persona.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data/Setup

2–3 hrs · Intermediate

To enable memory and goal-oriented behavior, you need to set up the foundational architecture of the AI agent. This includes preparing the environment and connecting to the OpenAI API.

What you'll learn

Set up Python, install necessary libraries (OpenAI, LangChain), and connect to the GPT model. Design a basic agent skeleton with input/output flow.

What you'll do

Python script with API setup and a basic agent scaffold. Screenshot of the agent successfully generating sample responses.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build/Execute

2–3 hrs · Intermediate

You will now integrate memory functionality so the agent can retain and recall user information across sessions. Add goal-setting logic to allow the agent to guide users toward task completion.

What you'll learn

Use LangChain to implement memory and goal-setting modules. Train the agent to store user preferences and recall them in future interactions. Test the agent's ability to track goals across conversations.

What you'll do

Python script with memory integration and goal-setting logic. A set of test cases demonstrating that the agent can recall memory and guide users to complete tasks.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: GenAI/Explanation

2–3 hrs · Intermediate

Users often need step-by-step instructions for complex processes. Add a generative layer to the agent for explaining multi-step tasks clearly.

What you'll learn

Integrate OpenAI's GPT capabilities to enable the agent to generate step by-step instructions for tasks such as scheduling a meeting or organizing a to-do list.

What you'll do

Python script demonstrating generative capabilities for step-by-step instructions. A test log showing the agent successfully explaining three distinct workflows.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit/Responsible AI

2–3 hrs · Intermediate

You must ensure the agent adheres to responsible AI practices. This includes avoiding biased responses, ensuring user data privacy, and providing disclaimers for ambiguous answers.

What you'll learn

Implement filters to detect and manage biased or inappropriate responses. Add user consent mechanisms for data storage and integrate disclaimers for uncertain outputs.

What you'll do

Python script with responsible AI features implemented. A document outlining responsible AI measures and testing results.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Recommendation

2–3 hrs · Intermediate

Your agent is ready for deployment, but you need to present its capabilities to the product team. Create a demo showcasing the agent's functionalities and explain its design choices.

What you'll learn

Develop a short presentation and record a demo of the agent performing key tasks, showcasing its memory, goal-setting, and instructional capabilities. Highlight responsible AI features.

What you'll do

Presentation slides (5–10 slides) covering agent design, features, and responsible AI considerations.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

16 AI Agent Developer - Customer Support Agent - Agent Designer

Industry: IT **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, LangChain, Dialogflow / Botpress, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the IT sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a AI Agent Developer, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand - Analyzing Customer Queries

2-3 hrs · Intermediate

You need to understand the common issues customers face to design an effective support agent.

What you'll learn

Analyze a sample dataset of customer support tickets to identify the top 5 most common issues.

What you'll do

Submit a brief report outlining the top 5 customer issues and how an AI agent can address them.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data/Setup - Preparing the FAQ Dataset

2–3 hrs · Intermediate

You need to format the FAQ data for training a conversational AI model. This involves cleaning the text, removing duplicates, and ensuring FAQs are mapped to clear response templates.

What you'll learn

Preprocess the FAQ dataset (remove noise, duplicates, and irrelevant data). Structure the data into a Q&A format (e.g., JSON or CSV format) suitable for training. Create sample response templates for each FAQ category.

What you'll do

Submit the cleaned and structured FAQ dataset along with response templates.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build/Execute - Developing the AI Agent

2–3 hrs · Intermediate

It's time to build the AI agent! Using OpenAI GPT (or an alternative NLP platform), train the model using the FAQ dataset and create dialogue flows to handle customer queries.

What you'll learn

Train the conversational AI model using the prepared dataset. Build logical dialogue flows for handling different FAQ categories. Test the model locally to ensure it responds accurately to queries.

What you'll do

Submit the Python code (or equivalent) for training and deploying the AI model, along with screenshots of test conversations.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: GenAI/Explanation - Handling Escalations

2–3 hrs · Intermediate

The AI agent needs to know when to escalate complex issues to a human agent. You will integrate logic to detect frustration or complex queries.

What you'll learn

Implement sentiment analysis to detect user frustration. Define trigger conditions for handoff to a human support representative.

What you'll do

Submit a logic flow diagram and code snippet demonstrating the escalation process.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit/Responsible AI - Ensuring Ethical AI Standards

2–3 hrs · Intermediate

You must ensure the AI agent operates ethically, avoiding biased or inappropriate responses.

What you'll learn

Audit the model's responses against a set of ethical guidelines. Implement safety filters and fallback responses for sensitive topics.

What you'll do

Submit an ethical audit report detailing the safety filters implemented and a log of edge-case tests.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Recommendations - Improving KPIs

2–3 hrs · Intermediate

Prepare a final presentation for the Customer Support Director showcasing the AI agent's capabilities and its expected impact on response times.

What you'll learn

Prepare a presentation with metrics showing the agent's impact on KPIs. Create a live demo showcasing the agent handling queries and escalating tickets. Recommend further improvements to the AI agent.

What you'll do

Submit the presentation slides and demo video.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

17 Agentic AI Consultant - Automate a Business Process - Agent Designer

Industry: IT **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, Streamlit, Process Automation, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the IT sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Agentic AI Consultant, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand the Role of Prompts

2-3 hrs · Intermediate

You have been hired by an enterprise that manages a large volume of customer service tickets. They want to use GenAI to classify tickets by issue type (e.g., billing, technical, feedback) and generate summaries for faster resolution.

What you'll learn

Research prompt engineering fundamentals. Learn how prompt structures (context, constraints, and examples) influence GenAI outputs. Study enterprise-centric use cases, focusing on structured data generation. 8

What you'll do

Submit a **1-page report** summarizing: Key principles of prompt engineering. How structured prompts can benefit enterprise workflows. Examples of prompt patterns for structured output.

When you are done with this task, mark it as complete to proceed to the next one.

✓ Completed

Task 2: Dataset Setup and Prompt Design

2–3 hrs · Intermediate

You've been provided with a sample dataset containing customer service tickets with columns like 'Ticket ID', 'Issue Description', and 'Customer Priority'. Your goal is to design initial prompts to classify these tickets by issue type and summarize them.

What you'll learn

Analyze the provided dataset structure. Design 3 initial prompts: 1. Classify tickets into predefined categories. 2. Generate concise summaries of ticket issues. 3. Identify high-priority customer concerns.

What you'll do

Submit a **document with your 3 prompts**, their intended outputs, and reasoning for their design.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build and Execute Prompts

2–3 hrs · Intermediate

Run your initial prompts on a GenAI platform (e.g., OpenAI GPT-4) and analyze the outputs. Refine your prompts iteratively to improve classification accuracy and summary quality.

What you'll learn

Test your prompts using the sample customer ticket dataset. Adjust context, constraints, or examples to improve outputs. Document the iterative refinements made to each prompt.

What you'll do

Submit: 1. **Initial outputs** from GenAI. 2. **Refined prompts** and their improved outputs. 3. A **brief explanation** of changes made and their impact.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Analyze Hallucinations and Explain GenAI Behavior

2–3 hrs · Intermediate

Some GenAI outputs contain errors (e.g., misclassifications, irrelevant summaries). Your task is to identify and explain these hallucinations, then adjust your prompts to minimize such errors.

What you'll learn

Analyze common hallucinations in the outputs (e.g., incorrect ticket classifications). Adjust prompts to reduce errors (e.g., add constraints or improve examples). Explain the behavior behind the hallucinations (e.g., ambiguous wording, lack of context).

What you'll do

Submit a **hallucination analysis report** with: Examples of errors. Adjusted prompts to reduce hallucinations. Explanations of GenAI behavior causing error.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit for Responsible AI

2–3 hrs · Intermediate

Ensure your prompts and outputs adhere to Responsible AI principles, including fairness, transparency, and accuracy. Avoid biases in ticket classifications and summaries.

What you'll learn

Perform a bias audit on GenAI outputs (e.g., verify fair classification across all categories). Document steps taken to ensure transparency and accuracy in prompts. Suggest improvements to align with Responsible AI principles.

What you'll do

Submit a **Responsible AI checklist** covering: Bias detection results. Transparency steps taken. Suggestions for ethical improvement.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Your Final Prompt Engineering Playbook

2–3 hrs · Intermediate

Compile your refined prompts, evaluation metrics, and Responsible AI findings into a **Prompt Engineering Playbook**. This will serve as a reusable resource for the enterprise.

What you'll learn

Summarize your prompt design process and key insights. Include examples of refined prompts and outputs. Provide actionable strategies for minimizing hallucinations and ensuring Responsible AI compliance.

What you'll do

Submit your **Prompt Engineering Playbook** (5-10 pages) with: Overview of prompt design principles. Tested and refined prompts. Evaluation metrics and Responsible AI strategies.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

18 GenAI Cybersecurity Analyst - AI SOC Investigation - Agent Designer

Industry: Cybersecurity + AI **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python, Splunk / SIEM APIs, Cybersecurity Analytics, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Cybersecurity + AI sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a GenAI Cybersecurity Analyst, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand the Problem - Crop Health Analysis

2-3 hrs · Intermediate

A group of farmers from a drought-prone region has provided crop health and environmental datasets, including satellite imagery, soil quality metrics, and weather forecasts. You need to understand the indicators of crop health and the risks involved.

What you'll learn

Research key factors affecting crop health (e.g., pests, climate, soil nutrients). Explore the provided dataset fields: 'Crop ID', 'Region', 'Soil Moisture', 'Temperature', 'Humidity', 'Pest Infestation', 'Yield'. Identify relationships between environmental factors and crop health.

What you'll do

Submit a summary document (PDF or Word) explaining crop health indicators and their relevance to risk prediction. Include visualizations of trends (e.g., temperature vs yield).

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data Preparation and Setup

2–3 hrs · Intermediate

The provided datasets contain missing values, outliers, and redundant fields. To ensure accurate AI model predictions, you need to clean and preprocess the data.

What you'll learn

Identify and handle missing values using imputation techniques. Remove irrelevant fields and detect outliers. Normalize numerical fields (e.g., 'Soil Moisture', 'Temperature').

What you'll do

Submit a cleaned dataset (CSV file) along with a Python notebook showing data preprocessing steps.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build the AI Model - Risk Prediction

2–3 hrs · Intermediate

Using the cleaned dataset, it's time to build an AI model that predicts crop health risks such as pest infestations or drought stress.

What you'll learn

Split the dataset into training and testing sets. Implement a classification model (e.g., Decision Tree or Random Forest) to predict 'Pest Infestation' risk. Evaluate model accuracy using metrics like precision, recall, and F1-score.

What you'll do

Submit your trained model code and a report on the model's performance (e.g., confusion matrix, key metrics).

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Explainable AI - Why Did the Model Predict This?

2–3 hrs · Intermediate

Farmers need to understand why certain risks are predicted. You must use Explainable AI (XAI) techniques to make model predictions transparent.

What you'll learn

Use the SHAP library to explain your AI model's predictions. Generate visual explanations for why specific predictions (e.g., pest infestation or drought stress) were made.

What you'll do

Submit SHAP plots for key predictions and a brief report explaining their relevance to farmers.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit for Responsible AI

2–3 hrs · Intermediate

AI models can unintentionally favor certain crops or regions, leading to biased outcomes. You must audit your model for fairness and ensure responsible AI practices are followed.

What you'll learn

Check for biases in predictions across regions ('Region' field). Create a fairness report highlighting any disparities and propose solutions (e.g., retraining with balanced data).

What you'll do

Submit a fairness audit report (PDF) with actionable recommendations for bias mitigation.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present AI Recommendations to Farmers

2–3 hrs · Intermediate

Based on your AI findings, prepare an advisory report for farmers. This report should include preventative measures, intervention strategies, and yield optimization techniques tailored to their crop health risks.

What you'll learn

Summarize key insights from your model's predictions. Provide actionable recommendations (e.g., irrigation schedules, pest control techniques). Create a visually appealing farmer advisory report.

What you'll do

Submit a farmer advisory report (PDF or PowerPoint) incorporating AI driven insights and recommendations.

2.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

19 Social Media Intelligence Analyst Decode a Brand Conversation - Agent Designer

Industry: Marketing & Branding **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Python / Pandas, NLP (Spacy/NLTK), Web Scraping, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Marketing & Branding sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Specialist, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. From understanding initial requirements to integrating advanced models and evaluating performance, your mission is to design a robust application that balances functionality, usability, and ethical considerations. Imagine working on a groundbreaking AI product for a global enterprise that aims to revolutionize productivity and technological capabilities. Your mission is to design, build, and test a specialized tool equipped with state-of-the-art functionality and a goal-oriented problem-solving approach. The solution should be able to seamlessly integrate into existing workflows, deliver high-quality outputs, and meet the specific needs of the business. You will also focus on responsible AI practices, ensuring that your deliverables meet strict ethical standards while offering a premium user experience.

If you would like to connect with the Tech Innovations Ltd team to find out more information please email microinternships@skillzza.com

Tasks & Deliverables

Task 1: Understand the Brand & Competitors

2-3 hrs · Intermediate

Your client's brand, **FitSphere**, is a direct-to-consumer fitness equipment brand. They provide high-quality, portable fitness gear for home workouts. Their key competitors are **HomeFit** and **ActiveEdge**. You need to understand the brand's market positioning and gather initial data for analysis. 46

What you'll learn

1. Research the brand FitSphere, its product offerings, and its target audience. 2. Identify 3 key competitors and compare their social media presence, including platforms they are most active on (e.g., Instagram, Twitter, TikTok). 3. Prepare a summary of FitSphere's strengths and weaknesses compared to its competitors.

What you'll do

A 2-3 slide summary of FitSphere's social media presence and its competitors' comparative analysis.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Collect and Prepare Social Media Data

2–3 hrs · Intermediate

Your team has access to FitSphere's public Twitter data via an API. You need to extract 500 recent tweets mentioning the brand and prepare the data for analysis.

What you'll learn

1. Use the Twitter API (or a provided dataset) to extract 500 tweets mentioning FitSphere. 2. Clean and preprocess the data: remove duplicates, stopwords, and irrelevant tweets. 3. Organize the cleaned data in a CSV file with the following columns: Timestamp Username Tweet content Engagement metrics (likes, retweets, replies)

What you'll do

A cleaned CSV file with the required fields, ready for analysis.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Analyze Sentiment of the Conversations

2–3 hrs · Intermediate

Your client wants to understand how customers feel about their brand. Use NLP-based sentiment analysis to classify the tweets as positive, negative, or neutral.

What you'll learn

1. Use Python and the VADER or TextBlob library to perform sentiment analysis on the tweets. 2. Add a new column to the CSV file for sentiment score (positive, negative, neutral). 3. Summarize the overall sentiment distribution for FitSphere.

What you'll do

Updated CSV with sentiment scores. A bar chart or pie chart summarizing sentiment distribution.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: Identify Themes Using Generative AI

2–3 hrs · Intermediate

Your client wants to know the major themes in customer conversations. Summarize the key topics and sentiments using an AI-powered tool.

What you'll learn

1. Use OpenAI GPT (or another NLP model) to identify and summarize key themes in the tweets. 2. Categorize the themes into positive and negative buckets (e.g., "Quality Issues," "Great Customer Service"). 3. Write a 250-word summary highlighting the major themes.

What you'll do

A thematic analysis report with key themes and examples of tweets under each category.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Conduct Competitor Benchmarking

2–3 hrs · Intermediate

Your client wants to know how their social media performance compares to competitors. Use a provided dataset containing social media metrics for FitSphere, HomeFit, and ActiveEdge.

What you'll learn

1. Analyze the dataset for key metrics such as engagement rate, sentiment distribution, and follower growth.
2. Compare FitSphere's metrics to its competitors and identify areas where the brand is leading or lagging.
3. Create a dashboard or visualizations to showcase the comparative performance.

What you'll do

A dashboard or set of visualizations comparing FitSphere's social media metrics with competitor.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Recommendations

2–3 hrs · Intermediate

Your client expects a comprehensive report with actionable insights. They need your recommendations to improve their social media strategy based on your analysis.

What you'll learn

1. Create a 5-7 slide presentation summarizing: Sentiment analysis and thematic insights. Competitive benchmarking results. Key recommendations for improving social media strategy.
2. Record a 5-minute video presenting your findings.

What you'll do

A presentation deck (PPT or PDF). A 5-minute recorded video explaining your analysis and recommendations.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.

20 UI/UX Designer Design an AI Product Experience - Agent Designer

Industry: Design & UI/UX **Partner Enterprise:** Tech Innovations Ltd
Duration: 12-18 hrs (Self-paced) **Mode:** Individual, task-based simulation
Primary Skills: Figma, User Journey Mapping, Prototyping, Skillzza AI Mentor

Overview & Problem Statement

Tech Innovations Ltd is a leading global enterprise operating at the cutting edge of the Design & UI/UX sector, with a mission 'To revolutionize service delivery and create long-term stakeholder value through trusted innovation'. With an annual revenue exceeding \$5.4 billion and a presence in over 30 countries, we collectively employ over 42,000 passionate professionals.

This job simulation is with our advanced innovation division, Tech Innovations Ltd Insights & Generative Technologies. You will gain insight into how our multi-disciplinary experts solve some of the most complex business problems using state-of-the-art AI solutions.

As a Specialist, you are tasked with delivering an innovative AI-driven solution capable of helping users navigate complex challenges efficiently. Tasks & Deliverables

Task 1: Understand - Conduct User Research

2-3 hrs · Intermediate

You are tasked with understanding the target audience for the AI mental wellness assistant. You need to uncover user pain points, preferences, and expectations for an AI-powered product that supports mental health.

What you'll learn

Create a Google Form survey with 10 targeted questions to gather insights on user needs (e.g., "What challenges do you face in maintaining mental wellness?"). Conduct 3 virtual interviews with potential users to uncover qualitative insights.

What you'll do

Submit a short report summarizing the survey results and key findings from interviews. Include charts or graphs representing quantitative data.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 2: Data/Setup - Develop Personas

2–3 hrs · Intermediate

Based on your user research, you need to create detailed personas that represent the core segments of your audience. These personas will guide your design decisions throughout the project.

What you'll learn

Use Miro or a similar tool to create 3 personas. Include key details: demographics, goals, frustrations, and behaviors. Highlight how each persona interacts with AI products and their expectations.

What you'll do

Submit a PDF or image export of your personas from Miro, ensuring each persona is well-defined with visual.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 3: Build/Execute - Design the User Flow

2–3 hrs · Intermediate

You need to map out the user journey for interacting with the AI mental wellness assistant, from onboarding to using its features (e.g., mood tracking, chatbot conversations).

What you'll learn

Use Miro to create a user flow diagram that highlights key paths like onboarding, accessing features, and receiving insights. Define decision points and actions at each step (e.g., "User selects mood tracker → AI provides analysis").

What you'll do

Submit a user flow diagram exported from Miro. Include annotations explaining each step and decision point.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 4: GenAI/Explanation - Create Wireframes

2–3 hrs · Intermediate

It's time to convert your user flow into wireframes for core screens of the AI product. Focus on intuitive layouts and ensuring users can easily interact with AI features.

What you'll learn

Design wireframes for 3 primary screens: Onboarding, Mood Tracking Dashboard, and Chatbot Interface. Ensure your designs follow accessibility guidelines (e.g., WCAG contrast standards).

What you'll do

Submit high-quality wireframes created in Figma or Adobe XD. Include annotations describing design choice.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 5: Audit/Responsible AI - Conduct Usability Testing

2–3 hrs · Intermediate

You need to ensure your wireframes deliver a seamless experience. Conduct usability tests to gather feedback and identify areas for improvement.

What you'll learn

Share your wireframes with 3 test users and ask them to perform specific tasks (e.g., "Navigate to the Mood Tracker"). Gather feedback on usability issues and suggestions for improvement.

What you'll do

Submit a usability test report summarizing participant feedback, including a prioritized list of design improvements.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Task 6: Present Recommendation - Final Design Proposal

2–3 hrs · Intermediate

You're presenting your design recommendations to the product team. Use data from research, personas, and usability tests to justify your decisions.

What you'll learn

Create a presentation deck showcasing your design process: research findings, personas, user flow, wireframes, and test results. Include actionable recommendations for the product team. 50

What you'll do

Submit your presentation as a PDF or PowerPoint file. Ensure it's visually engaging and includes clear, data-driven insights.

When you are done with this task, mark it as complete to proceed to the next one.

✓ **Completed**

Knowledge Assessment & Verification: Complete the online knowledge check, submit your code and presentation files for AI verification, and claim your **Skillzza Verified Certificate**.
