

AI Agent Job Simulations

20 Easy, Applied Lyzr-Style Blueprints

Teach-AI Research & Engineering Team

August 12, 2026

Abstract

This document outlines 20 easy, highly applied micro-internship modules modeled after the Forage job simulation platform. Each module focuses on specific, lightweight AI Agent blueprints (e.g., HR Skill Gap Detection, Proposal Writing, etc.) intended for rapid prototyping and implementation by interns.

Contents

1	1. HR Skill Gap Detection Agent - Human Resources	3
2	2. Leave Attendance Query Agent - Human Resources	5
3	3. Procurement Renewal Alert Agent - Procurement	7
4	4. AI Proposal Writer Agent - Sales	9
5	5. Bank Loan Application Reviewer - Banking	11
6	6. Financial Fraud Detection AI - Finance	13
7	7. Insurance Claim Status Agent - Insurance	15
8	8. Social Media Post Generator - Marketing	17
9	9. Sales Lead Qualifier Agent - Sales Operations	19
10	10. Legal NDA Review Agent - Legal	21
11	11. Refund Processing Agent - E-Commerce	23
12	12. Feedback Sentiment Analyzer - Customer Success	25
13	13. Inventory Alert Agent - Supply Chain	27
14	14. Property Matcher Agent - Real Estate	29
15	15. Appointment Scheduler - Healthcare	31
16	16. Expense Report Summarizer - Accounting	33
17	17. Interview Scheduling Assistant - Talent Acquisition	35

18	18. Vendor Invoice Extractor - Accounts Payable	37
19	19. SEO Keyword Suggestion Agent - Digital Marketing	39
20	20. Internal Policy FAQ Bot - Corporate Strategy	41

1 1. HR Skill Gap Detection Agent - Human Resources

Why complete this job simulation?

A risk-free way to experience work on the job with us in Human Resources. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Data Analysis](#) [Prompt Engineering](#) [Reporting](#)

Introduction from our Team

Welcome to the HR Skill Gap Detection Agent Job Simulation! We are thrilled to have you here.

TalentSphere is a global leader in human capital management solutions, helping enterprises build, manage, and retain world-class teams. We operate at the intersection of people and technology, providing platforms that streamline talent acquisition, performance management, and compliance reporting.

Founded by HR practitioners, TalentSphere understands that employee data is sensitive and contextually rich. We are currently exploring Generative AI to automate manual workflows inside our existing HR systems, acting as intelligent co-pilots that surface insights and flag anomalies before they become problems.

Our clients include Fortune 500 companies and rapidly scaling startups who rely on TalentSphere to cut administrative overhead and give HR teams the bandwidth to focus on the work that genuinely requires human judgment.

During this program, you will step into the role of a **HR Tech Analyst** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a HR Tech Analyst specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the HR Skill Gap Detection Agent.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the HR Skill Gap Detection Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the HR Skill Gap Detection Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the HR Skill Gap Detection Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

2 2. Leave Attendance Query Agent - Human Resources

Why complete this job simulation?

A risk-free way to experience work on the job with us in Human Resources. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Conversational AI](#) [Chatbot Design](#) [Problem Solving](#)

Introduction from our Team

Welcome to the Leave Attendance Query Agent Job Simulation! We are thrilled to have you here.

TalentSphere is a global leader in human capital management solutions, helping enterprises build, manage, and retain world-class teams. We operate at the intersection of people and technology, providing platforms that streamline talent acquisition, performance management, and compliance reporting.

Founded by HR practitioners, TalentSphere understands that employee data is sensitive and contextually rich. We are currently exploring Generative AI to automate manual workflows inside our existing HR systems, acting as intelligent co-pilots that surface insights and flag anomalies before they become problems.

Our clients include Fortune 500 companies and rapidly scaling startups who rely on TalentSphere to cut administrative overhead and give HR teams the bandwidth to focus on the work that genuinely requires human judgment.

During this program, you will step into the role of a **HR Automation Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a HR Automation Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Leave Attendance Query Agent.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Leave Attendance Query Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Leave Attendance Query Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Leave Attendance Query Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

3 3. Procurement Renewal Alert Agent - Procurement

Why complete this job simulation?

A risk-free way to experience work on the job with us in Procurement. Practice your skills with example tasks and build your confidence to ace your applications.

🏆 Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

❓ How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

🔧 Skills you will learn and practice:

[Process Automation](#) [Notification Design](#) [Data Extraction](#)

Introduction from our Team

Welcome to the Procurement Renewal Alert Agent Job Simulation! We are thrilled to have you here.

ProcureCore is a premier supply chain and procurement technology provider, focused on optimizing contract tracking, vendor evaluation, and spend analytics. We help organizations gain visibility into their global supply chains and extract actionable intelligence from complex operational data.

We were built by supply chain consultants who spent years watching organizations lose millions to missed contract renewals, rogue spend, and manual data entry errors. ProcureCore exists to make those problems structurally impossible.

As we embrace the next generation of AI, we are building automated agents to process vendor transactions faster, reduce contract risk exposure, and cut audit preparation time from weeks to hours.

During this program, you will step into the role of a **Procurement Analytics Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Procurement Analytics Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Procurement Renewal Alert Agent.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Procurement Renewal Alert Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Procurement Renewal Alert Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Procurement Renewal Alert Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

4 4. AI Proposal Writer Agent - Sales

Why complete this job simulation?

A risk-free way to experience work on the job with us in Sales. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Generative AI](#) [Business Writing](#) [Template Creation](#)

Introduction from our Team

Welcome to the AI Proposal Writer Agent Job Simulation! We are thrilled to have you here.

RevAccelerate is a cutting-edge sales enablement platform designed to help revenue teams scale their operations. From intelligent proposals to deal-room intelligence, our solutions operate as a force multiplier for every quota-carrying professional.

We integrate deeply with leading CRMs like Salesforce and HubSpot to provide context-aware, deal-specific insights. RevAccelerate is committed to ensuring every outbound communication is grounded in accurate data and calibrated to a brand's unique voice.

To stay ahead of the curve, we are integrating autonomous AI agents to further reduce proposal preparation time, increase outbound personalization at scale, and drive measurable improvements in win rates.

During this program, you will step into the role of a **Sales Operations Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Sales Operations Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the AI Proposal Writer Agent.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the AI Proposal Writer Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the AI Proposal Writer Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the AI Proposal Writer Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

5 5. Bank Loan Application Reviewer - Banking

Why complete this job simulation?

A risk-free way to experience work on the job with us in Banking. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Document Analysis](#) [Risk Assessment](#) [AI Workflow](#)

Introduction from our Team

Welcome to the Bank Loan Application Reviewer Job Simulation! We are thrilled to have you here.

GlobalTech Solutions is an enterprise software provider focused on optimizing high-volume, repetitive, and judgment-intensive workflows so teams can focus on what only humans can do.

Founded by seasoned industry practitioners, GlobalTech brings deep operational expertise to every product. We are known for building production-grade solutions that are auditable, explainable, and safe.

Trusted by over 200 enterprises, GlobalTech is now integrating cutting-edge LLM engineering to help our clients achieve measurable ROI through AI automation. This simulation gives you a front-row seat to our work.

During this program, you will step into the role of a **Credit Risk Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Credit Risk Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Bank Loan Application Reviewer.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Bank Loan Application Reviewer. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Bank Loan Application Reviewer. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Bank Loan Application Reviewer. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

6 6. Financial Fraud Detection AI - Finance

Why complete this job simulation?

A risk-free way to experience work on the job with us in Finance. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Pattern Recognition](#) [Data Interpretation](#) [Ethical AI](#)

Introduction from our Team

Welcome to the Financial Fraud Detection AI Job Simulation! We are thrilled to have you here.

LedgerIQ provides institutional-grade financial analytics and enterprise resource planning solutions. Our platforms streamline financial modeling, anomaly detection, regulatory reporting, and cash flow forecasting — converting raw ledger data into boardroom-ready intelligence.

Built alongside CFOs and FPA directors, LedgerIQ understands that financial outputs must be defensible, traceable, and compliant. Every computation must be logged, and every assumption must be auditable down to the source transaction.

We are currently pioneering AI automation within our financial stack to help our clients reduce month-end close cycles and achieve near-zero manual reconciliation errors, allowing finance teams to focus on strategy.

During this program, you will step into the role of a **Fraud Prevention Analyst** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Fraud Prevention Analyst specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Financial Fraud Detection AI.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Financial Fraud Detection AI. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Financial Fraud Detection AI. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Financial Fraud Detection AI. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

7 7. Insurance Claim Status Agent - Insurance

Why complete this job simulation?

A risk-free way to experience work on the job with us in Insurance. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Customer Support Automation](#) [Query Parsing](#) [API Integration](#)

Introduction from our Team

Welcome to the Insurance Claim Status Agent Job Simulation! We are thrilled to have you here.

GlobalTech Solutions is an enterprise software provider focused on optimizing high-volume, repetitive, and judgment-intensive workflows so teams can focus on what only humans can do.

Founded by seasoned industry practitioners, GlobalTech brings deep operational expertise to every product. We are known for building production-grade solutions that are auditable, explainable, and safe.

Trusted by over 200 enterprises, GlobalTech is now integrating cutting-edge LLM engineering to help our clients achieve measurable ROI through AI automation. This simulation gives you a front-row seat to our work.

During this program, you will step into the role of a **Claims Processing Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Claims Processing Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Insurance Claim Status Agent.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Insurance Claim Status Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Insurance Claim Status Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Insurance Claim Status Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

8 8. Social Media Post Generator - Marketing

Why complete this job simulation?

A risk-free way to experience work on the job with us in Marketing. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Creative Generation](#) [Brand Voice Alignment](#) [Prompt Tuning](#)

Introduction from our Team

Welcome to the Social Media Post Generator Job Simulation! We are thrilled to have you here.

MarketPulse is an advanced marketing intelligence platform that helps brands move from campaign intuition to data-driven, personalized execution. Our tools manage content workflows, campaign analytics, audience segmentation, and competitive monitoring.

Built for marketers by marketers, MarketPulse connects directly to major ad networks, analytics tools, and CMS platforms to ensure every campaign is grounded in real performance data — not guesswork.

We are currently launching AI-driven automation agents to help marketing teams ship campaigns faster, achieve deeper personalization at scale, and spend more time on creative strategy rather than manual reporting.

During this program, you will step into the role of a **Content Marketing Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Content Marketing Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Social Media Post Generator.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Social Media Post Generator. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Social Media Post Generator. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

⚠ Constraint: This agent must focus strictly on text-only generation (copywriting). Exclude any image generation capabilities from the scope of this project.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Social Media Post Generator. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

9. Sales Lead Qualifier Agent - Sales Operations

Why complete this job simulation?

A risk-free way to experience work on the job with us in Sales Operations. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Lead Scoring](#) [CRM Integration](#) [Conversational Design](#)

Introduction from our Team

Welcome to the Sales Lead Qualifier Agent Job Simulation! We are thrilled to have you here.

GlobalTech Solutions is an enterprise software provider focused on optimizing high-volume, repetitive, and judgment-intensive workflows so teams can focus on what only humans can do.

Founded by seasoned industry practitioners, GlobalTech brings deep operational expertise to every product. We are known for building production-grade solutions that are auditable, explainable, and safe.

Trusted by over 200 enterprises, GlobalTech is now integrating cutting-edge LLM engineering to help our clients achieve measurable ROI through AI automation. This simulation gives you a front-row seat to our work.

During this program, you will step into the role of a **Sales Tech Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce

manual overhead and improve response times using GenAI.

Your role:

- You are a Sales Tech Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Sales Lead Qualifier Agent.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Sales Lead Qualifier Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Sales Lead Qualifier Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Sales Lead Qualifier Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

10 10. Legal NDA Review Agent - Legal

Why complete this job simulation?

A risk-free way to experience work on the job with us in Legal. Practice your skills with example tasks and build your confidence to ace your applications.

Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Document Parsing](#) [Compliance Checking](#) [Summary Generation](#)

Introduction from our Team

Welcome to the Legal NDA Review Agent Job Simulation! We are thrilled to have you here.

LexGuard develops sophisticated legal operations software tailored for in-house counsel and compliance teams. Our platforms accelerate contract review, due diligence, and policy drafting by organizing structured data from unstructured legal texts.

We do not replace legal expertise. We amplify it. LexGuard aims to surface what matters so that lawyers can focus their energy on judgment, negotiation, and strategic advisory rather than document-level extraction.

By incorporating AI agents into our ecosystem, LexGuard helps legal teams process contracts faster, reduce outside counsel spend, and enter every transaction with a clearer, quantified view of risk.

During this program, you will step into the role of a **Legal Ops Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Legal Ops Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Legal NDA Review Agent.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Legal NDA Review Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Legal NDA Review Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ Task Three: Agent Blueprint Implementation

Using an easy, no-code/low-code platform (or a simple Python script), implement the Legal NDA Review Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ Task Four: Review & Refine

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

11 11. Refund Processing Agent - E-Commerce

Why complete this job simulation?

A risk-free way to experience work on the job with us in E-Commerce. Practice your skills with example tasks and build your confidence to ace your applications.

🏆 Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

❓ How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

🔧 Skills you will learn and practice:

[Transaction Review](#) [Policy Enforcement](#) [Automation](#)

Introduction from our Team

GlobalTech Solutions is an enterprise software provider focused on optimizing high-volume, repetitive, and judgment-intensive workflows so teams can focus on what only humans can do.

Founded by seasoned industry practitioners, GlobalTech brings deep operational expertise to every product. We are known for building production-grade solutions that are auditable, explainable, and safe.

Trusted by over 200 enterprises, GlobalTech is now integrating cutting-edge LLM engineering to help our clients achieve measurable ROI through AI automation. This simulation gives you a front-row seat to our work.

During this program, you will step into the role of a **E-Commerce Ops Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce

manual overhead and improve response times using GenAI.

Your role:

- You are a E-Commerce Ops Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Refund Processing Agent.
- Evaluate its accuracy and readiness for production.

✔ **Task One: Workflow Mapping**

Review the provided business requirements document and map out the decision tree for the Refund Processing Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ **Task Two: Prompt Design & System Instructions**

Write the core system prompt for the Refund Processing Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ **Task Three: Agent Blueprint Implementation**

Using an easy, no-code/low-code platform (or a simple Python script), implement the Refund Processing Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ **Task Four: Review & Refine**

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

12 12. Feedback Sentiment Analyzer - Customer Success

Why complete this job simulation?

A risk-free way to experience work on the job with us in Customer Success. Practice your skills with example tasks and build your confidence to ace your applications.

🏆 Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

❓ How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

🔧 Skills you will learn and practice:

[Sentiment Analysis](#) [NLP Basics](#) [Dashboarding](#)

Introduction from our Team

Welcome to the Feedback Sentiment Analyzer Job Simulation! We are thrilled to have you here.

GlobalTech Solutions is an enterprise software provider focused on optimizing high-volume, repetitive, and judgment-intensive workflows so teams can focus on what only humans can do.

Founded by seasoned industry practitioners, GlobalTech brings deep operational expertise to every product. We are known for building production-grade solutions that are auditable, explainable, and safe.

Trusted by over 200 enterprises, GlobalTech is now integrating cutting-edge LLM engineering to help our clients achieve measurable ROI through AI automation. This simulation gives you a front-row seat to our work.

During this program, you will step into the role of a **Customer Insights Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce

manual overhead and improve response times using GenAI.

Your role:

- You are a Customer Insights Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Feedback Sentiment Analyzer.
- Evaluate its accuracy and readiness for production.

✔ **Task One: Workflow Mapping**

Review the provided business requirements document and map out the decision tree for the Feedback Sentiment Analyzer. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ **Task Two: Prompt Design & System Instructions**

Write the core system prompt for the Feedback Sentiment Analyzer. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ **Task Three: Agent Blueprint Implementation**

Using an easy, no-code/low-code platform (or a simple Python script), implement the Feedback Sentiment Analyzer. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ **Task Four: Review & Refine**

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

13 13. Inventory Alert Agent - Supply Chain

Why complete this job simulation?

A risk-free way to experience work on the job with us in Supply Chain. Practice your skills with example tasks and build your confidence to ace your applications.

🏆 Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

❓ How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

🔧 Skills you will learn and practice:

[Threshold Monitoring](#) [Supply Chain Ops](#) [Notification Logic](#)

Introduction from our Team

Welcome to the Inventory Alert Agent Job Simulation! We are thrilled to have you here.

GlobalTech Solutions is an enterprise software provider focused on optimizing high-volume, repetitive, and judgment-intensive workflows so teams can focus on what only humans can do.

Founded by seasoned industry practitioners, GlobalTech brings deep operational expertise to every product. We are known for building production-grade solutions that are auditable, explainable, and safe.

Trusted by over 200 enterprises, GlobalTech is now integrating cutting-edge LLM engineering to help our clients achieve measurable ROI through AI automation. This simulation gives you a front-row seat to our work.

During this program, you will step into the role of a **Logistics Analyst** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce

manual overhead and improve response times using GenAI.

Your role:

- You are a Logistics Analyst specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Inventory Alert Agent.
- Evaluate its accuracy and readiness for production.

✔ **Task One: Workflow Mapping**

Review the provided business requirements document and map out the decision tree for the Inventory Alert Agent. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ **Task Two: Prompt Design & System Instructions**

Write the core system prompt for the Inventory Alert Agent. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.

✔ **Task Three: Agent Blueprint Implementation**

Using an easy, no-code/low-code platform (or a simple Python script), implement the Inventory Alert Agent. Feed it 3 test scenarios (e.g., edge cases) and document its responses.

✔ **Task Four: Review & Refine**

Review the agent's outputs. Did it hallucinate? Did it follow formatting constraints? Write a short summary of how you would refine the prompt or workflow for production.

14 14. Property Matcher Agent - Real Estate

Why complete this job simulation?

A risk-free way to experience work on the job with us in Real Estate. Practice your skills with example tasks and build your confidence to ace your applications.

🏆 Available Achievements:

- Certificate of Completion
- Resume Snippet
- Interview Tips
- Skills Verification

❓ How it works:

- Complete tasks guided by pre-recorded instructions from our team. No live sessions, all self-paced.
- Earn a certificate and add it to your resume and LinkedIn.
- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

- Stand out in applications. Confidently answer interview questions and explain why you're a good fit for our team.

Skills you will learn and practice:

[Calendar Integration](#) [Slot Management](#) [Patient Communication](#)

Introduction from our Team

Welcome to the Appointment Scheduler Job Simulation! We are thrilled to have you here.

CareBridge Health provides secure, scalable administrative solutions for healthcare organizations. We streamline clinical documentation, patient communication, and compliance workflows without compromising the privacy, accuracy, or empathy that healthcare demands.

Our platforms are strictly HIPAA-compliant and integrate seamlessly with leading EHR systems including Epic and Cerner. We ensure that every digital interaction is auditable and every patient flag is explainable.

CareBridge Health is actively developing AI agents to reduce the administrative burden on clinicians, accelerate prior authorization cycles, and improve patient satisfaction through timely, accurate outreach.

During this program, you will step into the role of a **Healthcare Admin Intern** and complete tasks that replicate the work this role does every day. You'll learn key skills in automation, strategy, and applied Generative AI. We hope this program provides a great resource for you to upskill and strengthen your resume!

Tasks

★ Intro & Scenario

Background context and your project team:

Your team has been tasked with helping the department automate its core workflows to reduce manual overhead and improve response times using GenAI.

Your role:

- You are a Healthcare Admin Intern specializing in AI-driven process optimization.
- You work within a larger operations team, collaborating with business leaders to deploy simple, effective AI agents.

Your goal:

- Analyze the existing workflow.
- Develop a prompt or lightweight blueprint for the Appointment Scheduler.
- Evaluate its accuracy and readiness for production.

✔ Task One: Workflow Mapping

Review the provided business requirements document and map out the decision tree for the Appointment Scheduler. Identify exactly where the AI agent will intervene and what data it needs to function correctly.

✔ Task Two: Prompt Design & System Instructions

Write the core system prompt for the Appointment Scheduler. Define its persona, constraints, and the exact output format (e.g., JSON or structured markdown) required by the business stakeholders.
