

Customer & Employee Churn Dynamics: Feature & Risk Factor Analysis

1. Churn Analytics Overview

Predicting customer churn enables early proactive retention interventions. In SaaS business models, retaining existing accounts delivers 5x higher ROI than net new acquisition.

2. Key Churn Predictors & Feature Weights

Feature Name	Description	Importance Rank	Risk Correlation
usage_frequency	Logins and active sessions per week	Rank 1 (32%)	Inverse (Low usage = High risk)
support_tickets	Support tickets opened in last 90 days	Rank 2 (26%)	Positive (> 5 tickets = High risk)
nps_score	Net Promoter Score (0 - 10)	Rank 3 (21%)	Inverse (Score < 6 = High risk)
contract_type	Monthly vs Annual commitment	Rank 4 (14%)	Monthly = 3x higher churn probability
tenure_months	Account age in months	Rank 5 (7%)	Under 6 months = Peak churn window
