

Enterprise AI API Service: Developer Guide & Launch Documentation

1. Developer Quickstart

All API requests require authentication via the **X-API-Key** HTTP header. Base URL: **<https://api.techcorp.ai/v1>**.

2. Code Example (Python)

```
import requests

headers = {"X-API-Key": "your_api_key_here"}
payload = {"text": "Long document text to be summarized..."}
response = requests.post("https://api.techcorp.ai/v1/summarize", json=payload, headers=headers)
print(response.json()["summary"])
```

3. Pilot Deployment Results

- Over 50,000 API calls processed in initial 14-day production pilot.
- Median latency: 142ms for embeddings, 820ms for LLM summarization.
- 99.95% availability maintained throughout testing.
